Unlocking the data

Tax ●

# Your opportunity

Quickly and effectively analyse Australian Border Force data to manage compliance, identify recovery opportunities and drive meaningful results for your customers.

Customs Brokers regularly obtain Australian Border Force (ABF) data files of their customers and potential customers past import transactions. They face the time consuming and labour intensive task of manipulating these vast data sets in spreadsheets.

The sheer volume of data cannot be easily and accurately managed in this format and the ability to effectively visualise is minimal. No functionality exists to compare the data to current legislation.

### **What is Broker Radar?**

Broker Radar is an online tool allowing brokers to upload ABF import files with ease and have the files processed by a sophisticated data analytics engine.

The broker can then view dashboards, interact with the results, download the underlying customs data and produce reports.

The results can also be played back to customers, enhancing the client relationship.

### **Why use Deloitte's Broker Radar?**

Our extensive customs and global trade knowledge is coded into our software, as is all the relevant legislation. Broker Radar will be kept up-to-date and will incorporate changes to legislation as and when they occur.

The analytics are pre-configured with meaningful reports relevant to brokers. Easy drill down functionality takes you quickly from the big picture view to the detailed entries. Brokers can now easily utilise sophisticated data analytics to manage risk and identify opportunity for their clients.

### **Powerful insights**

Broker Radar unlocks the value in your client data through insightful analytics and creative visualisation. The easy to use and intuitive interface allows you to utilise the power of analytics without any special knowledge or training.

### **Leading edge application**

Broker Radar will revolutionise the way brokers use ABF data. It puts in your hands the tools to drive considerable value for your clients and enhance your customer relations.

Deloitte's Global Trade Advisory team would be pleased to provide you with a demonstration of how Broker Radar works, and how it can enable your business to stay at the forefront when providing service to importers into Australia.

If you would like to learn more about Broker Radar® and making it work for your business, please email [brokerradar@deloitte.com.au](mailto:brokerradar@deloitte.com.au)

# Key benefits

Comprehensive analytics testing and visualisation of your client's import data

Identify opportunities or issues in relation to the inconsistent use of Tariff Classifications

Identify refund opportunities under Free Trade Agreements and Tariff Concession Orders and other concessions

Easily identify opportunities to pursue new Tariff Concession Order applications

Gain a full picture as to the customs brokers used by the importer (where full data set is available)

Map the supply chain, including country of origin, loading port and discharge port

Obtain comprehensive statistics around a client's import profile

## Which route does the importer's supply chain follow?
